ReviewFlow

Complete Customer Journey Flow

Step-by-Step Guide: From Registration to Full Platform Usage

Version 1.0 • October 2026

This document walks through every step a new customer takes — from their first visit to becoming an active user of ReviewFlow's complete feature set.

Table of Contents

Phase 1: Getting Started

1.1 Visit Landing Page

1.2 Register an Account

1.3 Email Verification

1.4 Choose a Plan & Pay

Phase 2: Initial Setup

2.1 Dashboard Overview

2.2 Add Your First Client (Business)

2.3 Add Business Location

2.4 Connect Google Business Profile

2.5 Import Locations from Google

2.6 Connect Meta (Facebook/Instagram)

Phase 3: Review Management

3.1 Sync Reviews from Google

3.2 View & Filter Reviews

3.3 Reply to Reviews (Manual or AI)

3.4 Configure Auto-Reply & WhatsApp Notifications

Phase 4: Content & Social Media

4.1 GBP Posts — Create & Publish

4.2 GBP Photos — Upload & Publish

4.3 Social Media — Post to Facebook/Instagram

4.4 AI-Generated Content & Captions

Phase 5: AI-Powered Tools

5.1 SEO Audit

5.2 Competitor Analysis

5.3 Keyword Research

5.4 Local Rank Checker

5.5 GBP Optimization Suggestions

5.6 AI Chat Mode

5.7 AI Image Generation

Phase 6: Business Operations

6.1 Leads CRM (Kanban Board)

6.2 WhatsApp Messaging

6.3 Invoicing System

6.4 Business Insights & Reports

6.5 Google Ads Reports

Phase 7: Team & Account Management

7.1 Team Members

7.2 Buy More Credits

7.3 Profile Settings

7.4 Upgrade / Change Plan

Phase 8: Admin Panel (Super Admin Only)

8.1 Admin Dashboard

8.2 Manage Users & Agencies

8.3 Manage Plans & Credit Packages

PHASE 1 Getting Started

The customer discovers ReviewFlow and creates their account. This phase covers registration, email verification, and plan selection.

1.1 Visit Landing Page

The customer visits the ReviewFlow website. The landing page showcases key features: review management, AI-powered replies, social media publishing, local SEO tools, lead management, and invoicing.

- Public pages available: Home, Features, Pricing, Login, Register
- No account required to browse pricing and features

1.2 Register an Account

The customer clicks **Register** and fills out the sign-up form:

- **Business Name** — becomes the Agency name
- **Full Name** — the account owner's name
- **Email Address** — used for login and notifications
- **Password** — minimum 8 characters, confirmed

Behind the scenes, the system automatically creates:

- An **Agency** record (the top-level account)
- A **Client** record linked to the agency (the first business)
- A **User** record with role **CLIENT_OWNER**
- A **Subscription** in **TRIALING** status (no plan yet)

The customer is immediately redirected to the **Plans page** to choose a subscription.

> **Note:** The trial status blocks access to AI-powered features until a plan is purchased.

1.3 Email Verification

A verification email is sent to the registered address. The customer clicks the link to verify their email.

- Email verification is **required** before connecting Google Business Profile
- Other features remain accessible while unverified
- The verification link can be resent from the profile page

1.4 Choose a Plan & Pay

The Plans page displays all available subscription plans with their features and pricing:

- Each plan shows: name, monthly price (INR), included credits, feature list
- The customer selects a plan and clicks **Upgrade**

Payment Flow (Razorpay):

- System creates a Razorpay order for the plan amount
- Razorpay checkout popup opens (supports UPI, cards, net banking, wallets)
- Customer completes payment
- System verifies the payment signature (HMAC-SHA256)
- On success: subscription activated, credits allocated, payment recorded

After payment, the customer is redirected to the **Dashboard**.

> **Note:** All payments are in INR via Razorpay. The HMAC signature verification ensures payment integrity.

PHASE 2 Initial Setup

After subscribing, the customer sets up their business profile by adding clients, locations, and connecting external accounts (Google, Meta).

2.1 Dashboard Overview

The main dashboard provides an at-a-glance view of the customer's business health:

- **Health Score** — 0-100 composite score across 6 categories: Reviews, Content, Social, SEO, Engagement, Completeness
- **Review Stats** — total reviews, average rating, unreplied count
- **Recent Reviews** — latest reviews with sentiment indicators
- **Rating Distribution** — chart showing 1-5 star breakdown
- **"Do Next" Actions** — prioritized list of recommended actions to improve the score

The dashboard is the central hub the customer returns to after every task.

2.2 Add Your First Client (Business)

If managing multiple businesses, the customer navigates to **Clients** and adds a new one:

- Click **Add Client**
- Enter: Business Name, Contact Email, Phone (optional)
- The client is created under the customer's agency

For single-business users, the client created during registration is sufficient.

2.3 Add Business Location

Each client can have one or more physical locations:

- Navigate to the client's detail page
- Click **Add Location**
- Enter: Location Name (title), Address, Phone, Website URL
- The location is linked to the client for review tracking and content management

2.4 Connect Google Business Profile

To sync live reviews and publish content to Google, the customer must connect their Google Business Profile account:

- Go to the client detail page → click **Connect Google**
- Redirected to Google's OAuth consent screen
- Grant permissions for Business Profile management
- Google redirects back → tokens are securely stored
- The client is now **connected** and can sync reviews / publish content

> **Note:** Email must be verified before connecting Google. OAuth state is stored in cache (not session) for reliability across redirects.

2.5 Import Locations from Google

Instead of manually adding locations, connected clients can import them directly:

- Click **Import from Google** on the client page
- System fetches all locations from the Google Business Profile API
- Each location (name, address, phone, website, Google resource name) is imported
- Imported locations are ready for review syncing and content publishing

2.6 Connect Meta (Facebook / Instagram)

To publish social media posts, the customer connects their Meta account:

- Navigate to **Social Media** section
- Click **Connect Facebook/Instagram**
- Redirected to Meta's OAuth flow
- Grant permissions for page publishing
- Meta tokens stored → can now publish to Facebook pages and Instagram

PHASE 3 Review Management

The core of ReviewFlow — syncing Google reviews, responding to customers, and using AI to generate professional replies.

3.1 Sync Reviews from Google

Once Google is connected, the customer syncs their reviews:

- Navigate to **Reviews** — see a card grid of all locations
- Click on a location card to view its reviews
- Click **Sync from Google** to pull the latest reviews

During sync, the system:

- Fetches all reviews from the Google Business Profile API
- Runs **sentiment analysis** on each review (local keyword matching — no AI cost)
- Stores reviewer name, photo, rating, comment, timestamp, and reply status
- If **Auto-Reply** is enabled: generates AI replies and posts them to Google

3.2 View & Filter Reviews

The review list for each location provides powerful filtering:

- **All Reviews** — complete list sorted by newest first
- **Unreplied** — reviews that haven't received a reply yet
- **Negative** — reviews flagged with negative sentiment

Each review displays: star rating, reviewer name/photo, comment text, sentiment badge, reply status, and timestamp.

3.3 Reply to Reviews (Manual or AI)

The customer can respond to reviews in two ways:

Manual Reply:

- Type a custom reply in the reply box
- Click **Submit Reply** → posted directly to Google

AI-Generated Reply:

- Click **Generate AI Reply** (costs 1 credit)
- AI considers: reviewer name, star rating, comment text

- Generates a professional, contextual reply
- Customer can edit before posting, or post directly

Note: AI reply generation costs 1 credit per reply. Credits are checked before generation.

3.4 Configure Auto-Reply & WhatsApp Notifications

Global settings available from the Reviews page:

- **Auto-Reply Toggle** — when ON, new reviews synced from Google automatically get an AI-generated reply posted back (1 credit each)
- **WhatsApp Notification Toggle** — when ON, sends a WhatsApp message alert for each new negative review

These settings apply to all locations under the agency.

PHASE 4 Content & Social Media

Creating and publishing content to Google Business Profile and social media platforms.

4.1 GBP Posts — Create & Publish

Publish posts directly to Google Business Profile listings:

- Navigate to **GBP Content** → **Posts**
- Click **Create Post**
- Select location, enter post body, choose event type (UPDATE, EVENT, OFFER)
- Optionally set schedule date/time for future publishing
- Save as **Draft** or click **Publish** to post immediately to Google

Published posts appear on the business's Google listing and Maps.

4.2 GBP Photos — Upload & Publish

Add photos to Google Business Profile listings:

- Navigate to **GBP Content** → **Photos**
- Upload a photo with a caption
- Select the target location
- Publish to Google → photo appears on the business listing

4.3 Social Media — Post to Facebook/Instagram

Publish content to connected social media accounts:

- Navigate to **Social Media**
- Click **Create Post**
- Enter caption, optionally attach an image
- Select platform(s): Facebook, Instagram, or both
- Click **Publish** → content is posted via Meta Graph API
- Failed posts can be retried with the **Retry** button

4.4 AI-Generated Content & Captions

Use AI to generate content instead of writing from scratch:

- **Generate Post Copy** — AI writes a GBP post body based on your prompt (2 credits)
- **Generate Caption** — AI creates a social media caption (2 credits)
- All AI-generated content can be edited before publishing

PHASE 5 AI-Powered Tools

Advanced AI tools for SEO analysis, competitor research, keyword discovery, and business optimization. All tools require an active plan and consume credits.

5.1 SEO Audit

Run a comprehensive AI-powered SEO audit of any business:

- Navigate to **AI Tools** → **SEO Audit**
- Enter the business name and location
- AI analyzes and generates a detailed report covering:
  - Google Business Profile completeness
  - Review quality and response patterns
  - Local SEO factors and recommendations
  - Content strategy suggestions
- Cost: **3 credits** per audit

5.2 Competitor Analysis

Analyze competitors in your local market:

- Navigate to **AI Tools** → **Competitor Analysis**
- Enter your business and up to 3 competitor names
- AI generates a comparative analysis with:
  - Strengths and weaknesses comparison
  - Review sentiment comparison
  - Market positioning insights
  - Actionable recommendations
- Cost: **3 credits** per analysis

5.3 Keyword Research

Discover relevant keywords for local SEO:

- Navigate to **AI Tools** → **Keywords**
- Enter your business type and location
- AI generates a list of relevant local keywords with:
  - Search intent classification

  - Relevance scoring
  - Usage recommendations
- Cost: **2 credits** per generation

5.4 Local Rank Checker

Check how your business ranks in Google for specific keywords:

- Navigate to **AI Tools** → **Rank Checker**
- Select a location from your connected businesses
- Enter a search keyword (e.g., "best pizza near me")
- System queries Google Places API and returns ranking results
- See where you appear relative to competitors
- Cost: **2 credits** per check

5.5 GBP Optimization Suggestions

Get AI-powered suggestions to improve your Google Business Profile:

- Navigate to **AI Tools** → **Optimization**
- Select a location
- AI analyzes the current profile and provides:
  - Missing information to add
  - Description improvements
  - Category and attribute suggestions
  - Photo and post recommendations
- Cost: **3 credits** per optimization run

5.6 AI Chat Mode

Have a conversation with an AI assistant about your business:

- Navigate to **AI Tools** → **AI Chat**
- Ask any business-related question
- AI responds with contextual advice about reviews, SEO, marketing, etc.
- Cost: **1 credit** per message

5.7 AI Image Generation

Generate marketing images using AI:

- Navigate to **AI Tools** → **AI Media**

- Enter a prompt describing the image you want
- AI generates an image using Gemini's image generation model
- Download or use the generated image as a GBP photo
- Cost: **5 credits** per image

PHASE 6 Business Operations

Day-to-day business tools: lead management, messaging, invoicing, and reporting.

6.1 Leads CRM (Kanban Board)

Manage potential customers through a visual pipeline:

- Navigate to **Leads**
- View the Kanban board with stages: NEW → CONTACTED → QUALIFIED → CONVERTED → LOST
- **Add Lead:** name, email, phone, source, notes
- **Move Lead:** drag or click to move between stages
- **Delete Lead:** remove leads no longer needed

Leads are scoped to the agency — all team members see the same pipeline.

6.2 WhatsApp Messaging

Send WhatsApp messages to customers directly from the platform:

- Navigate to **WhatsApp**
- View message history
- Enter recipient phone number and message
- Click **Send** → message sent via WhatsApp Cloud API

Note: Requires WhatsApp Business API credentials configured in .env.

6.3 Invoicing System

Complete invoicing workflow for billing clients:

Setup:

- Add **Customers** (name, email, phone, address, GSTIN)
- Add **Services** with categories and default pricing
- Configure **Billing Settings** (business name, address, tax rates, bank details)

Create Invoice:

- Select customer, add line items (service, quantity, rate)
- Tax calculations applied automatically
- Generate invoice number (auto-incrementing)

Manage Invoices:

- View all invoices with status: DRAFT → SENT → PAID / OVERDUE
- Mark as Sent, Mark as Paid
- Track payments and outstanding amounts

Expense Tracking:

- Record business expenses with category, amount, date, and notes

6.4 Business Insights & Reports

View analytics and download reports:

- Navigate to **Insights**
- View charts: review trends, rating distribution, response times
- Filter by date range and location
- Download reports as CSV for external analysis

6.5 Google Ads Reports

View Google Ads performance data (if connected):

- Navigate to **Ads**
- View campaign performance metrics
- Create new ad report snapshots

PHASE 7 Team & Account Management

Managing team access, purchasing credits, and updating account settings.

7.1 Team Members

Add team members to collaborate on business management:

- Navigate to **Team**
- Click **Add Member**
- Enter: name, email, password, role assignment

Roles:

- **CLIENT_OWNER** — full access to their business (clients, reviews, content, billing)
- **CLIENT_STAFF** — limited access, scoped to assigned client only
- **SUPER_ADMIN** — platform-wide access (admin panel)

Team members are managed per agency. Owners can update or remove members.

7.2 Buy More Credits

When credits run low, purchase additional credit packages:

- Navigate to **Billing** → **Buy Credits**
- View available credit packages (configured by admin)
- Select a package and click **Buy**
- Complete payment via Razorpay
- Credits are immediately added to the agency's balance

Credit costs reference:

Action	Credits
AI Review Reply	1
Generate Post / Caption	2
SEO Audit	3
Competitor Analysis	3
Keyword Research	2
Rank Check	2
GBP Optimization	3

AI Chat Message	1
AI Image Generation	5

7.3 Profile Settings

Update personal account information:

- Navigate to **Profile**
- Update: name, phone number, avatar (base64 upload)
- Change password (requires current password verification)

7.4 Upgrade / Change Plan

Switch to a different subscription plan:

- Navigate to **Billing** → **Plans**
- View all available plans with current plan highlighted
- Select a new plan → complete Razorpay payment
- Subscription updated immediately with new credit allocation

PHASE 8 Admin Panel (Super Admin Only)

Platform administration features accessible only to users with the SUPER_ADMIN role.

8.1 Admin Dashboard

Overview of the entire platform:

- Total agencies, users, and active subscriptions
- Revenue metrics and growth trends
- System-wide review and content statistics

8.2 Manage Users & Agencies

Full control over platform users:

- View all registered users across all agencies
- Create new users/agencies (manual onboarding)
- Edit user details, roles, and agency assignments
- Deactivate or delete user accounts
- **Credit Top-up:** manually add credits to any agency's balance

8.3 Manage Plans & Credit Packages

Configure the subscription plans and credit packages:

Plans:

- Create, edit, or delete subscription plans
- Set: name, price (INR), monthly credits, feature flags

Credit Packages:

- Create, edit, or delete one-time credit packages
- Set: name, credit amount, price (INR)
- Toggle active/inactive status

Journey Summary

The complete ReviewFlow customer journey takes a new user from registration through full platform adoption in a natural, progressive flow:

Phase	What Happens	Key Outcome
1. Getting Started	Register, verify email, choose plan, pay	Active subscription with credits
2. Initial Setup	Add clients, locations, connect Google & Meta	Business profile ready
3. Reviews	Sync, view, reply (manual/AI), auto-reply	Active review management
4. Content	Create GBP posts/photos, social posts, AI content	Multi-platform presence
5. AI Tools	Audit, competitors, keywords, rank, optimization	Data-driven improvements
6. Operations	Leads CRM, WhatsApp, invoicing, insights	Complete business workflow
7. Account	Team, credits, profile, plan changes	Scaled team usage
8. Admin	Users, agencies, plans, packages (admin only)	Platform management

ReviewFlow transforms local business management by providing an all-in-one platform for review management, content publishing, AI-powered SEO tools, lead tracking, and invoicing — all accessible from a single dashboard.
